Renewable energy isn't as accessible as it should be.

Through a first-of-its-kind food and beverage industry partnership, PepsiCo has created pep+ REnew with Schneider Electric — an independent advisor on renewable energy purchasing — to help value chain partners adopt renewable energy practices and reduce their carbon footprint.

Join us to create buying power.

By creating greater access to large-scale renewable electricity, pep+ REnew aspires to add more renewable electricity capacity to power grids, where able. There are two components to the program:

Learning

We'll help to educate our partners about their renewable energy choices.

Creating Buying Power

Through aggregate power purchasing agreements (PPAs), we'll combine energy buyers into one entity so they can negotiate from a stronger position.

This free program is offering participation to our customers and suppliers. Enrollment is open on an ongoing basis. Register via the pep+ REnew website today!
